

ASSG19: International Congress on the Biology of Fish (Mark Hartl, Heriot Watt University)

I gratefully received £430 towards attendance at the 14th International Marine Congress on the Biology of Fish, 28 June – 1 July, 2022 in Montpellier. I presented a poster in the Fish in a Toxic World Session on the optimisation of the Comet assay to deep-sea fish caught in baited traps. This is required to try and quantify the impact of deep-sea mining to inform regulatory bodies in a bid to minimise the environmental impact of deep-sea mining.

The conference attracted 350 delegates from all over the world and was a very important opportunity to make new connections and rekindle existing contacts and collaborations affected by the Covid pandemic.

The support I received covered the registration fee.
